- Health & Safety
- Housekeeping
- Introduction to Cleaning
- Kitchen Hygiene
- Washroom Hygiene

About the Introduction to Equipment Module

Like everything else, technology is slowly taking over the cleaning industry with mechanical cleaning equipment being used more regularly to implement a more effective regime. It is vitally important to get the most out of your equipment by ensuring you and your team know how to use it properly.

This course will help you understand how each piece of equipment can work in different situations and help you decide which one you should be using where.

We will also explore the two major types of vacuum cleaners, upright and cylinder, and the main differences between them. We will talk about tools and accessories that increase a vacuum cleaner's adaptability for tackling a wide range of cleaning tasks.

By the end of this course you will be armed with the knowledge you need to select and maintain cleaning machinery.
